

Choose one project from the list below. Make sure to include how evidence of chemical reactions indicate that new substances with different properties are formed. All projects are equal points.

Choose one project from the list below. Make sure it includes how evidence of chemical reactions indicate that new substances with different properties are formed. All projects are equal points.

Poster - Draw a poster that illustrates how evidence of chemical reactions indicate that new substances with different properties are formed.

Experiment - Design an experiment using common substances found in your home that will investigate and show evidence of how chemical reactions indicate new substances are formed.

Color Book - Design a five page coloring book that shows chemical changes that are creating new and different substances.

Game - Create a sorting game to help younger students determine the differences in chemical changes and physical changes.

Student Choice - Present your idea to the teacher for approval. Must include how evidence of chemical reactions indicate that new substances with different properties are formed.
